

## ReactJs handson 10:

### App.js:

```
import React from 'react';
import './App.css';

function App() {
  const heading = "Office Space";
  const sr = "https://png.pngtree.com/background/20230529/original/pngtree-corporate-business-office-background-picture-image_2784180.jpg";
  const itemname={ Name: "DBS", Rent: 50000, Address: "Chennai" }
  const getRentColor = (rent) => {
    return rent <= 60000 ? "textRed" : "textGreen";
  };

  return (
    <div className="App">
      <h1>{heading}, at Affordable Range</h1>
      <img src={sr} width="25%" height="25%" alt="Office Space" />

      <h1>Name:{itemname.Name}</h1>
      <h2 className={getRentColor(itemname.Rent)}> Rent:{itemname.Rent}</h2>
      <h3>Address:{itemname.Address}</h3>
    </div>
  );
}

export default App;
```

### Output:

>>npm start

## Office Space, at Affordable Range

**Name:DBS**

**Rent:50000**

**Address:Chennai**
